

Policy Review

**When storm clouds
present their threat...**

In today's highly competitive world, data access is more important than ever. The proliferation of e-commerce, demands for information sharing and the Internet increase the exposure of data to security threats. Futures Inc has an Information Assurance policy review and development team of experts to assist organizations in mitigating security threats.

Information Assurance can only be achieved by implementing a comprehensive set of policies and procedures that protect against accidental or malicious disclosure, modification, or destruction of your

organization's data. An effective Information Assurance program provides for the confidentiality, integrity, availability, authentication, and non-repudiation for your organization's information and information infrastructure.

With Futures Inc you gain expert guidance in developing a clear, concise Information Assurance policy that brings together your requirements, priorities, responsibilities, and organizational considerations. Our experts have a thorough understanding of public law, regulations, and directives that dictate how an organization manages, protects, and distributes data. Futures Inc experts provide assistance in the development, writing and updating of your security and information assurance policies and help you clarify your organization's most important security policy needs.

In the development of our clients Information Assurance policy, we will define, develop, and pursue protection goals and objectives that align with our clients' management philosophy and enhance their overall business process.

For additional information, please contact the Futures Inc experts by phone or go to our website. We look forward to hearing from you.

**Let Futures brighten your
horizon with expert policy
review.**
